Q1. Food Delivery Billing System (Multiple Inheritance using Two Interfaces)

Score: 0.00 TC: 0/3 passed

CODE

```
import java.util.Scanner;
interface DeliveryCharge{
    double calculateDeliveryCharge(double foodCost);
}
interface CouponDiscount{
    double calculateDiscount(double foodCost, String couponCode);
}
public class FoodOrder implements DeliveryCharge, CouponDiscount{
    public double calculateDeliveryCharge(double foodCost){
        if (foodCost >= 500)
            return 0;
        else
            return 50;
    }
    public double calculateDiscount(double foodCost, String couponCode){
        if (couponCode.equals("SAVE10"))
            return foodCost*0.10;
        else
            return 0;
    }
    public static void main(String[] args)
    {
        Scanner sc = new Scanner(System.in);
        double foodCost = sc.nextDouble();
        String couponCode = sc.next();
        FoodOrder fo = new FoodOrder();
        double deliveryCharge = fo.calculateDeliveryCharge(foodCost);
        double discount = fo.calculateDiscount(foodCost,couponCode);
        double finalBill = foodCost + deliveryCharge - discount;
        System.out.println("Food Cost: "+foodCost);
        System.out.println("Delivery Charge: "+deliveryCharge);
        System.out.println("Discount: "+discount);
        System.out.println("Final Bill: "+finalBill);
        sc.close();
    }
}
```

INPUT

400
SAVE10

OUTPUT

Food Cost: 400.0
Delivery Charge: 50.0
Discount: 40.0
Final Bill: 410.0

Q2. Hotel Billing System (Multiple Inheritance using One Class and One Interface)

Score: 0.00 TC: 0/3 passed

CODE

```
import java.util.Scanner;
interface ServiceCharge{
    double calculateServiceCharge();
}
public class Room implements ServiceCharge{
    int roomNumber;
    String guestName;
    double roomRent;
    Room(int roomNumber, String guestName, double roomRent){
        this.roomNumber = roomNumber;
        this.guestName = guestName;
        this.roomRent = roomRent;
    }
    public double calculateServiceCharge(){
        if (roomRent >= 5000)
            return roomRent*0.12;
        else
            return roomRent*0.08;
    }
    public static void main(String[] args){
        Scanner sc= new Scanner(System.in);
        int roomNumber=sc.nextInt();
        sc.nextLine();
        String guestName=sc.next();
        double roomRent=sc.nextDouble();
        Room obj = new Room(roomNumber, guestName, roomRent);
        double serviceCharge = obj.calculateServiceCharge();
        double finalBill = roomRent+serviceCharge;
        System.out.println("Room Number: "+roomNumber);
        System.out.println("Guest Name : "+guestName);
        System.out.println("Room Rent : "+roomRent);
        System.out.println("Service Charge : "+serviceCharge);
        System.out.println("Final Bill : "+finalBill);
        sc.close();
    }
}
```

INPUT

205
Ambani
6000

OUTPUT

Room Number: 205
Guest Name: Ambani
Room Rent: 6000.0
Service Charge: 720.0
Final Bill: 6720.0
